

TAILHOLT METRO DISTRICTS

9/27/2021

Hello,

This year the non-potable pump water system will be turned off Friday 10/15/2021.

This is the third Friday of October every year.

The new function that THMD is doing this year and continuing every year is blowing out the entire non-potable water system, including having air for your yards to use.

On Saturday 10/23/2021 the THMD will blow out the District mains, in doing so you will be able to use this air for your irrigation system. The District has a winterization schedule set up for you the homeowner to use the air in the non-potable system. Please set your irrigation clock to the winterization schedule or do manually.

After you have cleaned your in-line filter, (This can be done the week before.) and it is your time to blow out on the winterization schedule; be sure to blow out each zone out for 3 to 5 minutes. Or do manually watching your system and as you see no more watering coming out of the irrigation system, move on to the next zone. Once fully blown out, **close your main water valve.**

Before the blowout:

1. Clean your in-line filter.
2. Set your irrigation clock to the winterization schedule for your area or do manually.
3. Blow out each zone out for 3 to 5 minutes or until you see only air coming out.
4. Turn off your ball valve at your connection point of your irrigation system,

Any questions please contact the Districts.
